GPS ANTENNA CABLING INSTALLATION

GPS Antenna Wiring Diagram

Notice

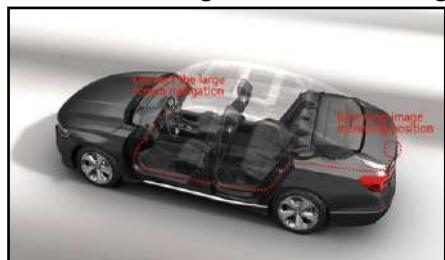

1. The GPS antenna can be installed inside the car, such as on the instrument platform, or outside the car, such as on the roof.
2. The GPS antenna must have an open "view" facing the sky. If the vehicle glass is affixed with explosion-proof film or heat-insulating film, it may greatly reduce the intensity of the satellite signal received by the GPS antenna; in this case, it is recommended to install the GPS antenna outside the vehicle.

GPS antenna installation steps:

1. Before pasting the GPS antenna, be sure to clean the adhesive area with an appropriate oily cleaner. After cleaning, tear off the paper on the back, place the GPS antenna and press it firmly.
2. Remove the side panel and pass the cables through the storage compartment until they reach the main console, making sure that the GP cables are tied securely to the original cables.
3. Connect the GPS antenna plug to the host computer.
